I. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

The screenshot displays the 'System Information' window in Windows. The 'System Summary' tab is selected, showing a list of system details. Red boxes highlight the following information:

Item	Value
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.22631 Build 22631
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	DESKTOP-8Q6E6C0
System Manufacturer	HP
System Model	HP Laptop 15s-fq5xxx
System Type	x64-based PC
System SKU	8H5Q2PA#ACJ
Processor	Intel(R) Core(TM) i3-1115G4 @ 3.00GHz, 2995 Mhz, 2 Core(s), 4 Logical Pro...
BIOS Version/Date	Insyde F.53, 23-08-2022
SMBIOS Version	3.2
Embedded Controller Version	53.28
BIOS Mode	UEFI
BaseBoard Manufacturer	HP
BaseBoard Product	88A2
BaseBoard Version	53.28
Platform Role	Mobile
Secure Boot State	On
PCR7 Configuration	Elevation Required to View
Windows Directory	C:\Windows
System Directory	C:\Windows\system32
Boot Device	\Device\HarddiskVolume1
Locale	India
Hardware Abstraction Layer	Version = "10.0.22621.2506"
User Name	DESKTOP-8Q6E6C0\HP
Time Zone	India Standard Time
Installed Physical Memory (RAM)	8.00 GB
Total Physical Memory	7.70 GB
Available Physical Memory	3.89 GB
Total Virtual Memory	10.4 GB
Available Virtual Memory	5.41 GB
Page File Space	2.75 GB
Page File	C:\pagefile.sys
Kernel DMA Protection	Off

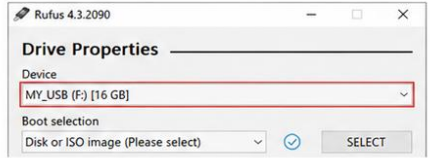

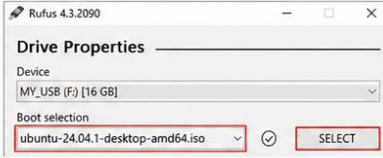

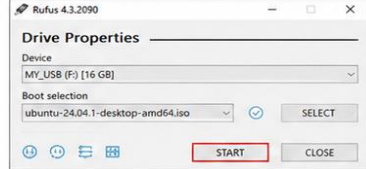

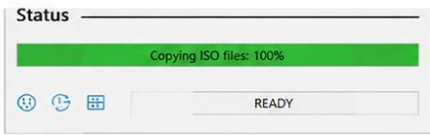

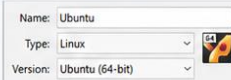

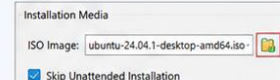

At the bottom of the window, there is a search bar with the text 'Find what:' and buttons for 'Find' and 'Close Find'. Below the search bar, there are two checkboxes: 'Search selected category only' and 'Search category names only'. The Windows taskbar is visible at the bottom, showing the Start button, search bar, and several application icons. The system tray on the right shows the date and time as 11:35 AM on 13-08-2025, along with language and network icons.

➤ This screenshot shows the System Information of a Windows PC. It displays the Windows version, Processor (CPU), and Installed RAM details.

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation. Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Create Bootable Linux USB and Start Installation

1 Download Linux ISO Go to the official website and download any Linux distribution ISO. Example: Ubuntu  ISO file downloaded (example): ubuntu-24.04.1-desktop-amd64.iso	2 Insert USB Drive Insert a USB flash drive (8GB or larger recommended).  Note: All data in the USB will be erased.	3 Open Rufus Download and open Rufus application. (https://rufus.ie)  Rufus Rufus is a free tool that helps format and create bootable USB drives.		
4 Select USB Drive In Rufus, select your USB drive from the "Device" dropdown. 	5 Select ISO File Click "SELECT" and choose the Linux ISO file you downloaded. 	6 Start Creating Bootable USB Keep other settings as default and click "START". 		
7 Wait for Process to Complete Rufus will format the USB and copy files. Wait until the process is 100% complete. 	8 Bootable USB Ready Your USB is now ready to install Linux. Safely eject the USB from your PC.  Bootable Linux USB is Ready!	9 Boot from USB and Start Installation Restart your PC and open Boot Menu (F12 / F9 / Esc / Del – varies by PC). Select your USB drive and press Enter. Linux installation screen will appear.  		
No USB Drive? Use VirtualBox (Virtual Installation) 	1 Open VirtualBox Open Oracle VM VirtualBox and click on "New". 	2 Create New Virtual Machine Give name (e.g., Ubuntu), select Type: Linux, Version: Ubuntu (64-bit). 	3 Attach ISO File In "Installation Media", select the Linux ISO file you downloaded. 	4 Start the VM Click "Start" and Linux installation will begin in the virtual machine. 

❖ Create a Bootable Linux USB

- 1. Download Linux ISO – Download Ubuntu or Fedora ISO.**
- 2. Insert USB – Connect an 8 GB or larger USB.**
- 3. Open Rufus – Start the Rufus software.**
- 4. Select USB – Choose your USB drive in Rufus.**
- 5. Select ISO – Click Select and choose the downloaded Linux ISO.**

6. Click Start – Click Start to create the bootable USB.

7. Wait – Wait until Rufus finishes copying the files.

8. USB Ready – Your USB is now bootable.

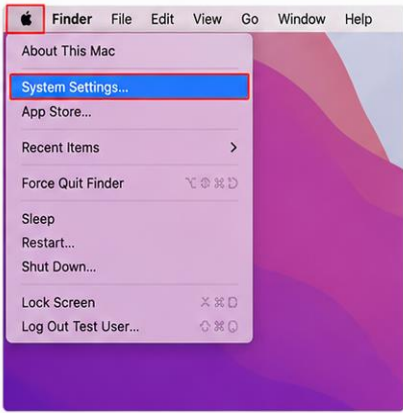

9. Boot from USB – Restart the PC, open the Boot Menu, select the USB, and start Linux installation.

Note: Creating the bootable USB can erase the data already stored on the USB.

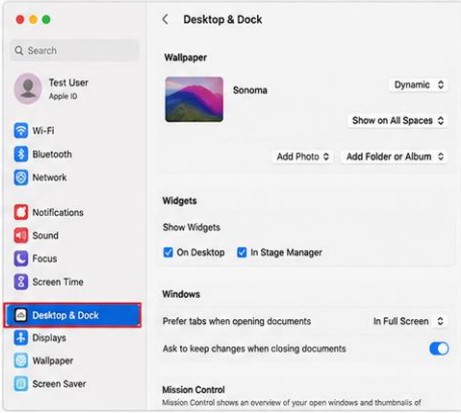

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati. Hint: Find 'Language & Region' in System Preferences to add or change languages.

Change Desktop Wallpaper in macOS

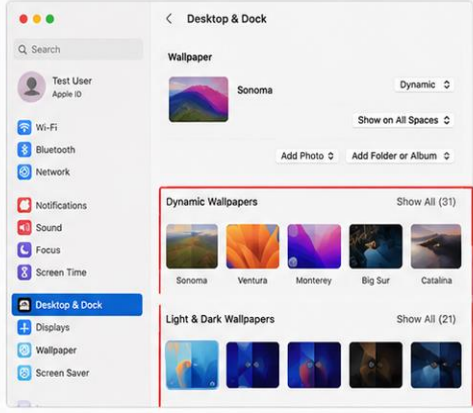

1 Click the Apple (🍏) menu and select System Settings.

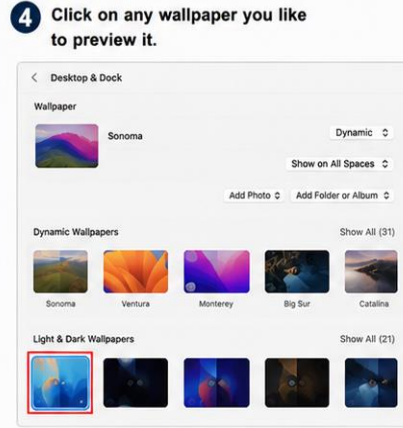

2 In System Settings window, click on Desktop & Dock.

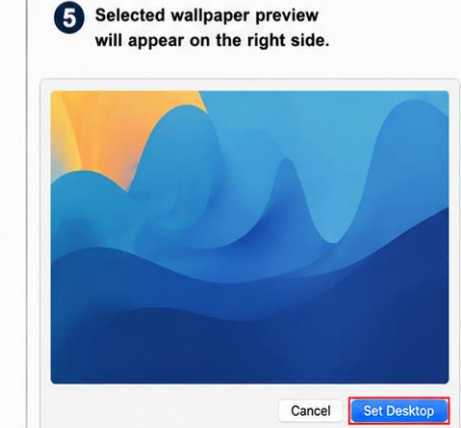

3 In the Wallpaper section, you will see available wallpapers.

4 Click on any wallpaper you like to preview it.

5 Selected wallpaper preview will appear on the right side.

6 Click Set Desktop. The new wallpaper will be applied to your macOS.

Note: You can also click [Add Photo](#) to choose any picture from your Mac.

Steps to Change Wallpaper in macOS

1. Click the Apple () menu and open System Settings.
2. Click Desktop & Dock.
3. Find the Wallpaper section.
4. Choose any wallpaper you like.
5. Preview the selected wallpaper.
6. Click Set Desktop to apply it.

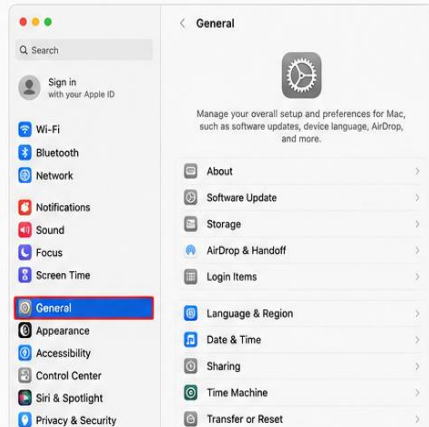

Result: The new wallpaper will appear on your Mac desktop.

❖ Change Language in macOS

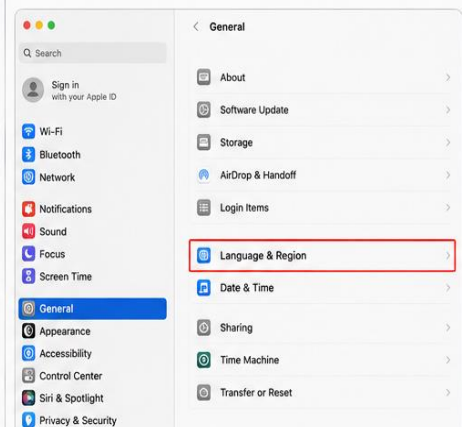

1 Open System Settings
Click the Apple  menu and select System Settings.

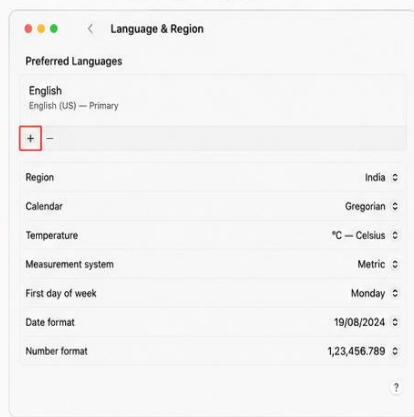

2 Click on General
In the System Settings window, click on General in the sidebar.

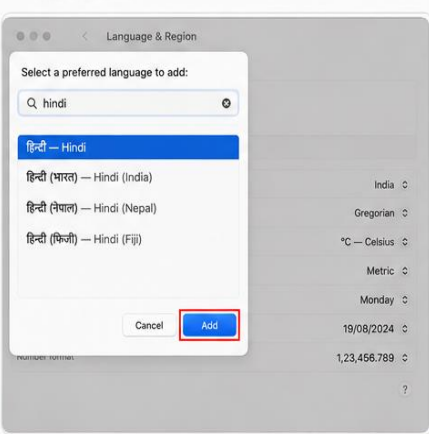

3 Click on Language & Region
In General settings, click on Language & Region.

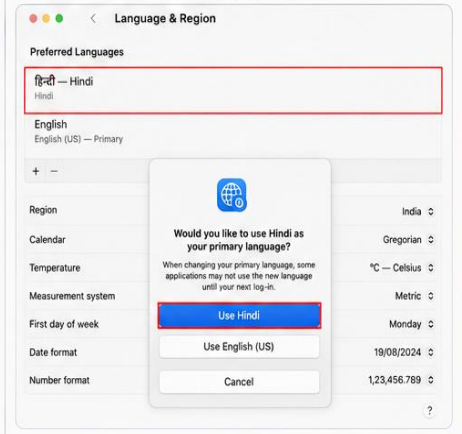

4 Click the + button
In Language & Region, click the + button to add a new language.

5 Select a language and click Add
Search and select Hindi (or Gujarati) and click Add.

6 Set as Primary Language
Drag Hindi (or Gujarati) to the top and click Use Hindi (or Use Gujarati).

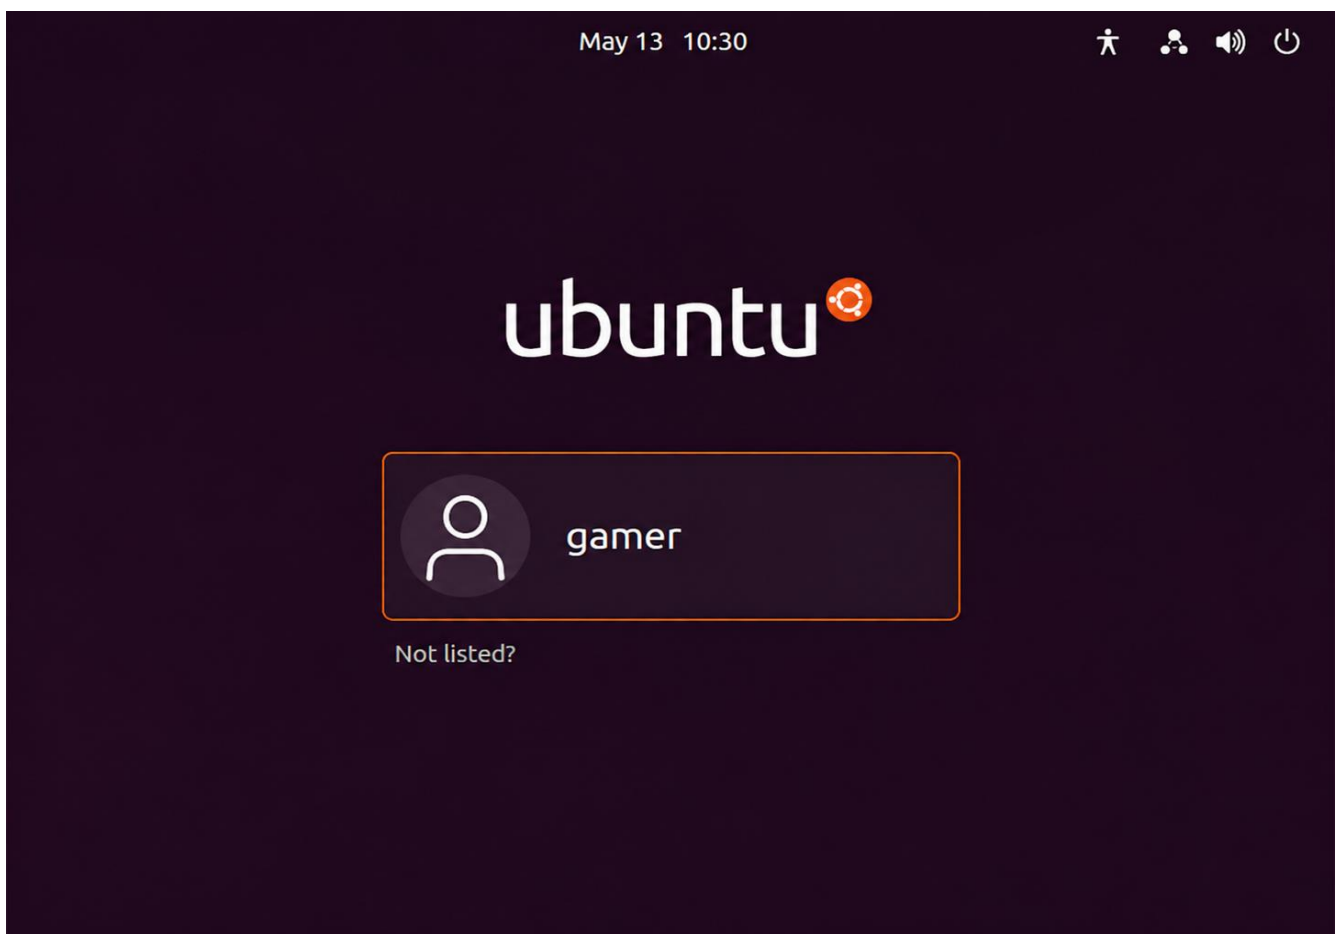

Steps to Change Language in macOS

1. Click Apple () → System Settings.
2. Click General.
3. Click Language & Region.
4. Click the + (Add) button.
5. Select Hindi or Gujarati and click Add.
6. Move Hindi/Gujarati to the top and select Use Hindi/Gujarati.

Result: The macOS system language will change to Hindi or Gujarati.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

- ❖ **Ubuntu installation was completed successfully, and the new user “gamer” was created.**

The gamer account is shown on the Ubuntu login screen, confirming the setup was successful.

5. **Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.**

Windows 10 Installation Guide

1. Prepare the Installation USB

- **Download the official Windows 10 ISO.**
- **Create a bootable USB using Rufus or Microsoft's Media Creation Tool.**
- **Backup important files before installation.**

2. Start Windows Installation

- **Insert the bootable USB into the laptop.**
- **Restart the laptop and open the Boot Menu (often F12, F9, Esc, or another key depending on the laptop).**
- **Select the USB drive.**
- **Choose Install Now.**

3. Select Installation Type

- **Choose Custom: Install Windows only.**
- **Select the drive where Windows will be installed.**

4. Partitioning Tips

- **If doing a fresh installation, delete old Windows partitions only after backing up important data.**
- **Select the Unallocated Space and click New.**
- **Windows will automatically create the required system partitions.**
- **For a simple installation, you can allow Windows to use the available space rather than manually creating many partitions.**

 **Important: Deleting or formatting a partition can permanently erase its data.**

5. Complete Installation

- Windows will copy files and restart several times.
- Select your region, keyboard layout, network, and user account.
- Create a password/PIN if required.

6. Privacy Settings

After installation:

- Open Settings → Privacy.
- Review Location, Camera, Microphone, Diagnostics, and other permissions.
- Turn off permissions you do not need.
- Review Activity History and advertising/privacy options.

7. Windows Updates

- Go to Settings → Update & Security → Windows Update.
- Click Check for updates.
- Install available updates and restart the laptop if required.
- Also install important device drivers.

8. Final Check

Check that:

- Wi-Fi works.
- Sound works.
- Display resolution is correct.
- Keyboard and touchpad work.
- Windows Update is working.
